POWERSCAN™ PD9530 BECOMES PD9531 THE 2D INDUSTRIAL SCANNER ADDS ONE

OVERVIEW

The PowerScan™ 9500 family represents the Datalogic 2D hand held area imager offering with rugged mechanics for industrial applications.

Given the recent diminishing lifetime of electronic components in combination with a cross-sectorial component shortage impacting electronic devices manufacturers, Datalogic has decided to renew the PowerScan PD9530 product line with some minor releases where critical electronic components have been replaced in order to ensure continuity of product availability and increased life span.

The **PowerScan PD9531** imager will ensure the same functionalities and features as the replaced PD9530 imager and will be completely compatible with all PD9530 imager accessories. The Pricelist will remain the same as the current offering.

The new PowerScan PD9531 products and kits will be released October 25, 2018 while the current PD9530 imager will be obsoleted effective February 1, 2019. Because the PowerScan PD9531 family is completely equivalent to the PD9530 family in terms of features and characteristics, **all orders for the PD9530 imagers could be migrated to the new PD9531 imagers based on the product availability.**

The cordless PowerScan PM9500 (STAR) and PBT9500 (Bluetooth®) models will have the same upgrade to ensure continuity of product availability, along with a revised battery pack. The new cordless products will be available at the beginning of Q2 2018.
