

Confidex Car Distribution Label™

In the last phase of car manufacturing chain the cars are being transported to various dealers and locations. RFID system makes it possible to automate the car distribution process from the car final assembly until it arrives at the dealer.

Confidex Car Distribution Label™ is an UHF RFID label designed to be used in automated applicator and RFID printer setups. Label's materials ensure durability in varying weather conditions but also ensures clean removal when needed - label's adhesive leaves no residuals on the car window after it's removed. Confidex Car Distribution Label™ is readable with gate reader setups and can be encoded and printed on site with vehicle identification number, car manufacturing and distribution details.

Product overview:

Type: EPC Class1 Gen2 (ISO 18000-6C) compliant passive RFID label

Read range: 4-6 m / 13-20 ft

Memory: 240bit EPC + 512bit user memory

Dimensions:
144 x 120mm
5.67 x 4.72 in

Materials:
Synthetic label with removable adhesive

Delivery format: On reel
